

## Appendix F: Delivery Tests

| Functionality                                                                                     | Expected Result                                                                                                                                                                                                                    | Actual Result                                                                                                                                                                  | Status |
|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| FAQ Widget                                                                                        | FAQ opens; each question expands correctly. Only one item can be open at a time. Clicking anywhere outside closes the FAQ.                                                                                                         | Tested all dropdowns: works.<br><br>Cannot have multiple open; Opening one closes the previous.<br><br>Closes when clicking anywhere on the screen.                            | Pass   |
| Navigation buttons:<br>Create event /<br>Dashboard                                                | Clicking Create event navigates to the Create Event page.<br><br>Clicking Dashboard navigates to the Dashboard page.                                                                                                               | Both buttons work and route to the correct page.                                                                                                                               | Pass   |
| Scoring Template selection page<br><br>(Ranking/Battle/Poll + help “?” + Decide Later + Continue) | All template cards/buttons are clickable and behave correctly.<br><br>“?” help shows info for the selected template and updates when clicking another “?”.<br><br>Continue should not proceed unless a scoring template is chosen. | All buttons work as intended.<br><br>“?” buttons display text; clicking another changes the text.<br><br>Continue does not work if no scoring template is chosen, as intended. | Pass   |
| Back button: Back to templates                                                                    | Clicking Back to templates navigates back to the scoring template selection page.                                                                                                                                                  | Back button works as intended (navigates back).                                                                                                                                | Pass   |
| Setup choice: AI assisted setup                                                                   | Clicking AI assisted setup opens the AI-assisted flow/page.                                                                                                                                                                        | Works as intended (Opens AI-assisted setup).                                                                                                                                   | Pass   |
| Setup choice: Manual setup                                                                        | Clicking Manual setup opens the                                                                                                                                                                                                    | Works (opens manual setup).                                                                                                                                                    | Pass   |

|                                                                                    |                                                                                                                                                                        |                                                                                                                                        |      |
|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|------|
|                                                                                    | manual setup flow/page.                                                                                                                                                |                                                                                                                                        |      |
| AI assisted setup flow (chat + event summary panel)                                | User can complete the chat flow, event details/summary updates in the right panel based on the chat. The AI stays on-topic and does not produce out-of-scope behavior. | Filling everything in works; summary is displayed on the right side. AI stays in context and does not do what it's not supposed to do. | Pass |
| Manual setup form + live preview                                                   | Filling in the manual form updates a live preview with the entered values.                                                                                             | Manual filling works and gives live preview.                                                                                           | Pass |
| Judging settings model (open + fields + defaults)                                  | Clicking "Open judging settings" opens the model and shows the different judging fields/settings.                                                                      | Model opens and fields display correctly. Default is that it checks all when opening.                                                  | Pass |
| Manual setup: Continue to Event summary                                            | Clicking Continue opens an Event summary/overview page showing the configured event details.                                                                           | Continue working and give an overview afterwards.                                                                                      | Pass |
| Event summary: Back buttons (dark top-left + green bottom-left) with state restore | Clicking either Back returns to the previous step and preserves/restores the entered information (no reset).                                                           | Back buttons navigate back and information is restored                                                                                 | Pass |
| Event summary: Confirm & save                                                      | Clicking Confirm & save saves/creates the event successfully and shows a success confirmation / routes to Dashboard.                                                   | Save an event works and displays in the event dashboard.                                                                               | Pass |
| Dashboard: load and display events list                                            | Dashboard loads events from server and displays them in the table.                                                                                                     | Dashboard presents all user events                                                                                                     | Pass |
| Dashboard: Edit event                                                              | Clicking Edit restores/loads the selected event so it                                                                                                                  | Edit restores an event and it can be changed; works.                                                                                   | Pass |

|                             |                                                                                                    |                                                                |      |
|-----------------------------|----------------------------------------------------------------------------------------------------|----------------------------------------------------------------|------|
|                             | can be changed successfully.                                                                       |                                                                |      |
| Dashboard: Delete event     | Clicking Delete removes the selected event successfully.                                           | Delete works and deletes the event.                            | Pass |
| Dashboard: new event button | Clicking “New Peers Event” starts a new event flow and routes back to setup selection (AI/manual). | New event works and sends the user back to the selection page. | Pass |
